Product Description

“A user-centered platform where individuals can create web pages best suited to their interests”

- user base?
 - New Programmers
- purpose?
 - To provide a “world” that users can utilize for self expression and connects individuals around the world on the basis of genuineness

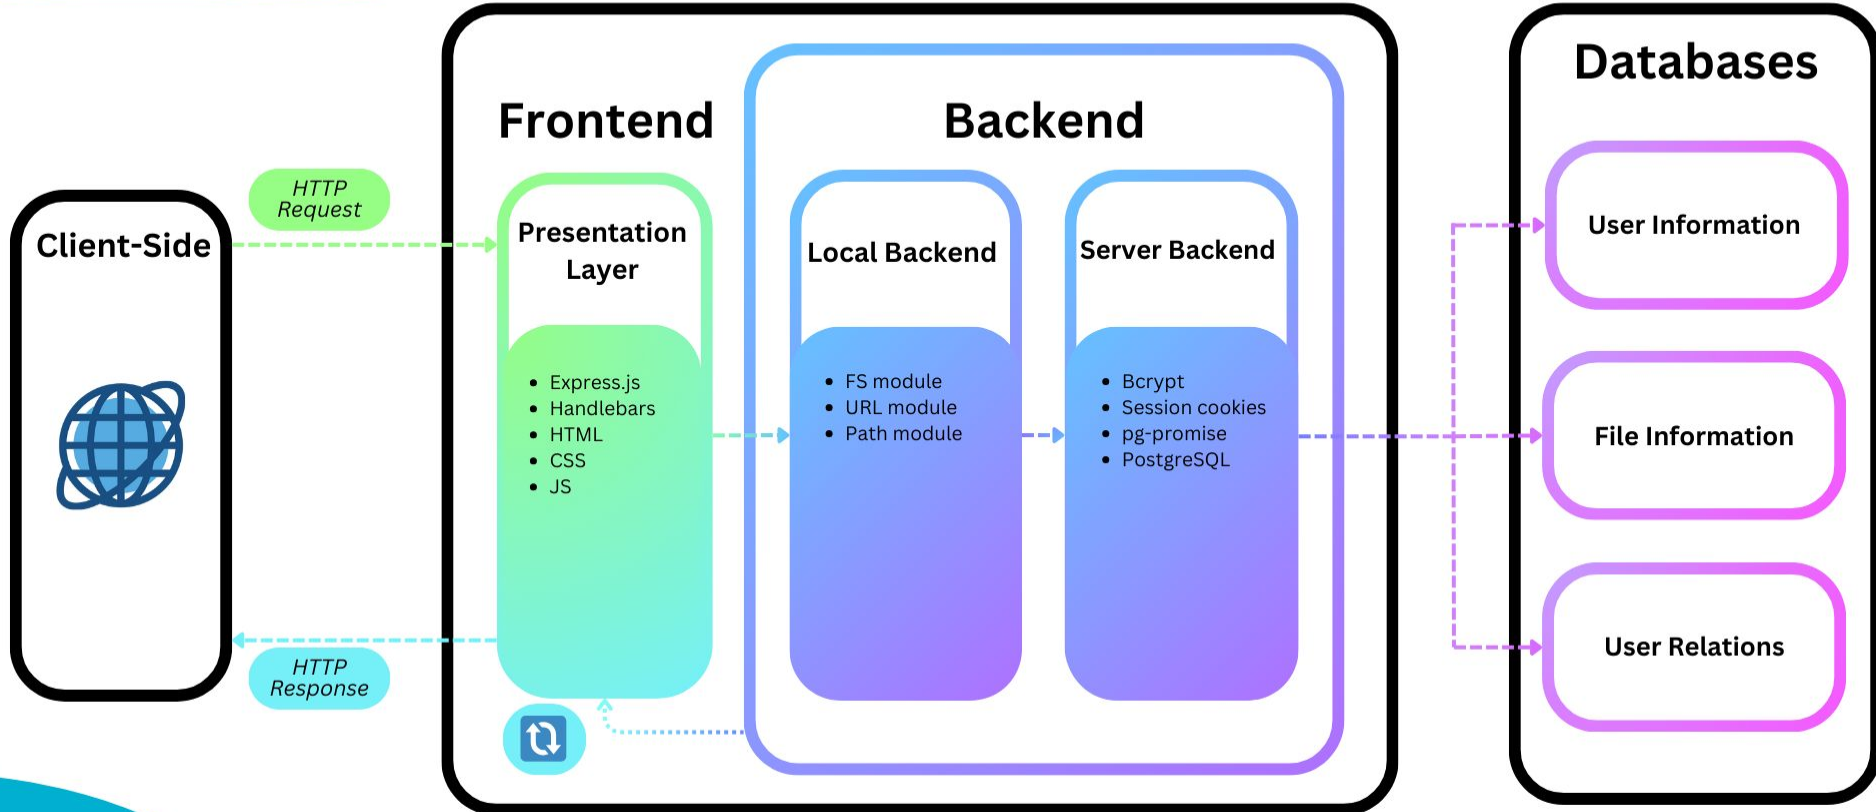

Tools Used

- Docker (containerization) ★★★★★ 
- PostgreSQL (database) ★★★★★  <- Slonick the Elephant!
- Git/Github (version control) ★★★★★  
- Github Projects (project tracking) ★★★★★ 
- VS Code (IDE) ★★★★★ 
- NodeJS (application server) ★★★★★ 
- Figma (UI design) ★★★★★ 
- Other tools/frameworks: Express, bcrypt ★★★★★  
- **Methodology:** Peer-Code Reviews

Key decisions

- Website sharing > social media
- File storage in Docker
- Changed friends from partial -> page
- Changed from worldchat -> messages
- Tag system to describe user world
-

Architecture Diagram

Project Challenges

- How are we going to *store* these worlds exactly?
- What ideas do we have time to add and what ideas do we have to cut?
 - expanded on in “Future Scope”
- Security risks
- Communication within the team
- API set up

Future Scope

- “World Chat”
- Expanded user profile
- Tutorial Page
- Allow users to show their code for their world
- Liking system for worlds
- Content moderation
- Add different tags to account for increased functionality
